TO WHOM IT MAY CONCERN,

ECONSTRUCT BUILDING AND PROJECT MANAGEMENT

Econstruct was the successful tenderer and subsequently the Builder of a recently completed domestic project in Subiaco.

As Building Designer and Contract Administrator I worked closely with Geoffrey Britton, Phil Crogin and their team.

Econstruct were forthcoming during tender negotiations in modifying the scope of works and standard of finishes to achieve the project budget.

They were efficient in job organisation, programming and executing the works and in detail completion.

They were pro-active and careful in anticipating construction issues and liaison with the Structural Engineer. This was particularly evident as structural concerns were revealed during the partial demolition of the existing 80-year-old cottage.

The construction period spanned a most difficult time in the building industry, particularly with regard to supply of materials and labour. Econstruct were quick to attend to difficulties and propose alternative solutions.

The working environment was congenial and professional.

I would have no difficulty in employing Econstruct on future projects or recommending their engagement.

Yours sincerely,

William Clark, Building Designer
